FOR BONSAI WORK
Mugho Pine,
Douglas Fir,
Japanese Black Pine
and Bristle Cone Pine
are ideally suited.
As a special service,
if requested,
we will select stock
most adaptable to
Bonsai work at our
regular list price.

*Indicates root pruned seedlings, stock which will give you a head start—almost the equal of a transplant—with extra dense, fibrous roots.

**Indicates field transplants.

TERMS: Minimum order, \$5.00. Quantities of 50, 500 and 12,500 of a size and kind are sold at the 100, 1000 and 25,000 price, respectively. Orders may be booked one-fourth cash and the balance C.O.D. All prices, F.O.B. Allegan, Mich.

SPRING SHIPPING STARTS MARCH 15
FALL SHIPPING STARTS SEPTEMBER 15

Plain Talk from Paul...

Dear Friends --

There's an old saying in the trade that warns us against "planting a \$1 tree in a 10¢ hole."

Got talking with an Iowa planter this summer and he told us he wouldn't plant a tree if he couldn't "stamp it in." In fact, he has two or three fellows following his planting machine, straightening trees and stamping them firmly in the ground. He has put more than one million, 200 thousand trees into the ground and still believes, as we do, that proper planting is all-important.

If you're hand-planting, it's a good rule to root-prune the planting stock. Here at the nursery, we figure that the roots on stock up to six inches should be trimmed to six inches. On 6-12" stock, we trim roots to eight inches.

If you don't have a furrow to plant in, we suggest "scalping" an area of about 18 inches for each tree. The hole should be deep enough to accomodate the roots, wide enough to accomodate the roots without jamming them in, which could cause the tree to strangulate.

We've said it before and probably will be saying it forever and ever . . . PLANT EARLY!

Choice of a proper site is a very debatable subject . . . our only advice is to avoid frost pockets with fir, spruce . . . White Pine, White Spruce and Black Spruce will tolerate wet feet, but we try to avoid sites with extremely dense vegative growth, be it grass, brush or weeds.

Thanks again for all your interesting notes and letters, and for your orders!

Sincerely,

Paul Armintrout

↑...here's what we mean when we say "extra dense, fibrous root systems."
